

Features for Application Document

1. User Workflows

Customer Workflow:

1. Create an account with name and email (one time)
2. Browse the catalog and download or cache it on the phone
3. Search and filter items
4. Choose quantities and place the order, with name and email pre-filled from the account
5. Receive an email receipt
6. View past orders and re-order from them
7. Open store info (hours, contact, deals) from a side panel

2. Functional Requirements

Customer-facing:

- FR-1.1 — Create account via email and name
 - FR-1.2 — Send order receipt to email
 - FR-3.1 — View price/description of items
 - FR-3.2 — Select quantity, add to cart
 - FR-3.3 — Order details sent to staff + customer
 - FR-3.4 — Hold copies of previous orders in account
-
- FR: Customer can download/view the catalog PDF
 - FR: Customer can search items by title/keyword
 - FR: Customer can filter items by category, author, price and availability
 - FR: Customer can view past orders
 - FR: Customer can re-order from a past order
 - FR: Customer can view store info (hours, contact, deals) from a side panel
 - FR: Name and email are pre-filled at checkout from the account

3. Non-Functional Requirements

- NFR-1.1 — The app reflects updates made in the staff's existing system
- NFR-1.2 — App loads in under 5 seconds
- NFR-2.1–2.3 — Minimal data collection, explicit consent, customer password-protected access

- NFR-3.1–3.6 — Scalability for future inventory/catalog changes, future system integration
- NFR-4.1–4.3 — Simple UI, self-contained client experience, full documentation delivered at launch

4. Necessary Features

- Catalog browsing/search/filter
- Order placement + email receipt
- Customer accounts
- Order history
- Inventory sync

5. Required Data Access Per Feature

Feature	Data Needed
Catalog browsing	Inventory data (title, price, availability, category, author)
Order placement	Cart contents, customer email, quantity
Order receipt	Email, order summary
Order history	Email (or account ID) tied to past orders
