

Client Meeting

1. Transcript of meeting from notetaker:

First Client Meeting - (September 10, 2026) - (6:00 pm - 6:30pm)

Attendance: Amber, Frank, Steven, Reese, Isaiah, Kartik

Notes:

- Buck turner is the store manager
- Asking for us to revamp the order forms
- Would like an app to be made for the order forms page to be made mimicking the website
- Downloading system catalogue link to cache information
- Keeps track of the items ordered (basic total and for PI items for pricing contact store)
- **APP CATALOGUE FOR PHONE ORDERING ONLY. LEAVE THE SITE ALONE**
- manager@drnos.com
- <https://www.drnos.com/ordering.html>
- Minimize screen clutter (search function)
- See if they can get an app made so that person can download with phone so they can have the same functionality from his html page on their phone. If possible they can see from previous months on their phone to see what they order previously.
- Can download catalog from their device and save it.
- Uses ChatGPT and Gemini to code this locally on the website.
- Modernize the ordering page. Would like an ordering app for the page. Have any functionality from the website onto the phone.
- Really tough to do phone ordering for current system.
- Nice to have dedicated app to carry the functions of the Ordering tab
- Wants an app translation for the current system.
- Have previous months saved so people can look at their old orders.
- Revamped order forms
- Mimic the order form. Not let all the information take up the screen the entire time. Let them choose to see that.
- Make the orders simple and easy to operate.
- Meeting on Thursday around 5-6pm
- No current employee logins, sent via email. Only concern, could go back and check their previous orders.
- Dr. No's email via store. Contact Buck.

2. Collaborative reflection on your first client meeting

Steven: This was my 2nd team meeting with a project client, my first meeting being with my software engineer capstone. This group was much smaller so it was able to flow smoothly with little interruption. I liked how direct the client was. Straight to the point, explained the problem, the system they used, and what they wanted from us. Whenever we asked a question, we got clear clarification and feedback and more details on what they wanted. For our next meeting, I want to be able to show up with more ideas and prepare more detailed questions to ask when we eventually run into a roadblock.

Frank:

Kartik: This was my 2nd meeting with a project client, the first one being my Software Capstone project. The client was respectful and gave straight forward answers about what he needed and gave details on what the project should be like and how it should function. When someone asked a question, he was quick to respond with a detailed answer that answered it. I still think we need to work with the client on what exactly we need to do. For our next meeting I plan on bringing some more

questions about what he wants the final product to look like and what features he wants to include in it.

Amber: This was my 3rd team meeting with a project client. My first one was from my software engineering internship, then my capstone project. Out of all three of my experiences, I think the client for this class project was the most straightforward with exactly what they wanted. The client made it very easy to understand what was expected. I was able to ask lots of questions too. I think the meeting went well however I think my time management could've been slightly better given that I was a couple minutes late. I was able to gain a better understanding of what's to be expected from the client in the meeting.

Isaiah: This was my first team meeting with a project. So far, with my current experiences, I really do appreciate the client for being as straightforward as possible in regards to what he wants the group to provide. Our team is solid and communicative with great note taking skills!

Reese: This was my second team meeting with a project client, my first being my Capstone meeting, and I felt that it was pretty informative considering the type of product we are building. I felt that our note keeping was much more team oriented when compared to my first meeting. Additionally, the client for

this project had a much more specific product he wants built, and some specific technical details that has directed our team a lot more. I felt that our overall communication could have been a little stronger however, with our limited understanding of the current product being a catalyst for a lack of more task specific questions. In all, I felt that this meeting went well and offered a much different experience than my other project.
