

Features for Application Document

1. User Workflows

Customer Workflow:

1. Create an account with name and email (one time)
2. Browse the catalog and download or cache it on the phone
3. Search and filter items
4. Choose quantities and place the order, with name and email pre-filled from the account
5. Receive an email receipt
6. View past orders and re-order from them
7. Open store info (hours, contact, deals) from a side panel

Staff Workflow:

Staff do not use the app. They keep managing inventory, catalogs and pricing in their existing system. Customer orders reach the store by email. The app only displays what the existing system provides and sends orders out. It has no staff login, inventory editing or analytics.

2. Functional Requirements

FR-1 Accounts

- FR-1.1 — Customer can create an account with name and email
- FR-1.2 — System sends the order receipt to the customer's email
- FR- 1.3 — Name and email are pre-filled at checkout from the account

FR-3 Ordering

- FR-3.1 — Customer can view the price and description of items
- FR-3.2 — Customer can select the quantity of an item when adding it to an order
- FR-3.3 — Placed orders are emailed to the store and to the customer
- FR-3.4 — System keeps copies of the customer's previous orders in their account

FR-5 Catalog

- FR- 5.1 — Customer can download and view the catalog PDF
- FR- 5.2 — Customer can search items by title or keyword
- FR- 5.3 — Customer can filter items by category
- FR- 5.4 — Customer can filter items by author/creator

- FR- 5.5 — Customer can filter items by price
- FR- 5.6 — Customer can filter items by availability

FR-6 Order History

- FR- 6.1 — Customer can view a list of past orders
- FR- 6.2 — Customer can re-order the items from a past order

FR-7 Store Info

- FR- 7.1 — Customer can open store hours and contact information from a side panel
- FR- 7.2 — Customer can view current deals and mailing/order discount information

3. Non-Functional Requirements

- NFR-1.1 — The app reflects updates made in the staff's existing system
- NFR-1.2 — App loads in under 5 seconds
- NFR-2.1–2.3 — Minimal data collection, explicit consent, customer password-protected access
- NFR-3.1–3.6 — Scalability for future inventory/catalog changes, future system integration
- NFR-4.1–4.3 — Simple UI, self-contained client experience, full documentation delivered at launch

4. Necessary Features

- Catalog browsing/search/filter
- Order placement + email receipt
- Customer accounts
- Order history
- Inventory sync

5. Required Data Access Per Feature

Feature	Data needed
Account creation	Name, email
Pre-filled checkout	Name, email

Catalog browsing	Title, price, description, category, author, availability
Catalog download	Catalog file or link
Order placement	Cart items, quantities, name, email
Order receipt	Email, order summary
Order sent to store	Order summary, customer name and email, store email address
Order history	Past orders tied to the account (items, quantities, prices, dates)
Re-order	Past order contents, current availability
Store info	Hours, contact info, deals
